US Average Revenue per Job Posting on Indeed (or US ARPJ) is calculated by dividing HR Technology US revenue in a given period by the average number of daily US job postings on Indeed during that period, as measured by the Indeed Hiring Lab, the economic research arm of Indeed. US ARPJ growth rate is the year over year change in US ARPJ.

The Indeed Job Postings Index (JPI) is a representation of all jobs on US Indeed, excluding those that do not meet certain Hiring Lab quality and relevancy standards, and is intended to provide a consistent and reliable measure of US job posting trends over time. Data on non-seasonally adjusted Indeed job postings are an index of the number of job postings on a given day, using a seven-day trailing average. The index is set to 100 on February 1, 2020. Data for several dates in 2021 and 2022 are missing and were interpolated. We regularly review and update our methodology of JPI for such reasons as the evolution of labor market and Indeed's platform, which may apply retrospectively to historical JPI data and US ARPJ growth rate. These figures in this presentation are based on the latest data as the date hereof.

Internal data, hires per minute is a calculation of hired signals per year on Indeed and Glassdoor, divided by minutes per year. A hired signal refers to the event when a specific job seeker is hired for a specific job on a specific date. Hired signals are counted either when an employer or job seeker explicitly communicates a hire occurred (e.g., via survey or web form) or when there is other clear evidence from Indeed and Glassdoor data that a hire occurred (e.g., from a resume or an Indeed message) and may not represent all hires facilitated by Indeed and Glassdoor.

As of April 1, 2025, HR Solutions of Matching & Solutions was transferred to HR Technology, and Matching & Solutions was renamed Marketing Matching Technologies from FY2025. The pro forma results were calculated assuming that the above transfer had been effective on April 1, 2024, and the consolidated guidance and quarterly actual results for each segment for FY2025 are shown in comparison with the pro forma results for FY2024. The calculation of pro forma results reflects adjustments to inter-segment internal revenue and corporate overhead costs in Matching & Solutions. As a result, there are slight differences between FY2024 actual results and the pro forma results other than HR Technology Japan and Marketing Matching Technologies.
